

Up-lighting

Features

Up-lighting, or "mood lighting" is one of the simplest and most effective ways to completely transform the look of a venue.

Stunning results can be achieved very simply to complement the colour scheme for your evening

Our up-lights utilise LED technology to create rich palettes of colour that enhance the features of a venue, such as pillars, arch-ways, brickwork etc.

Benefits

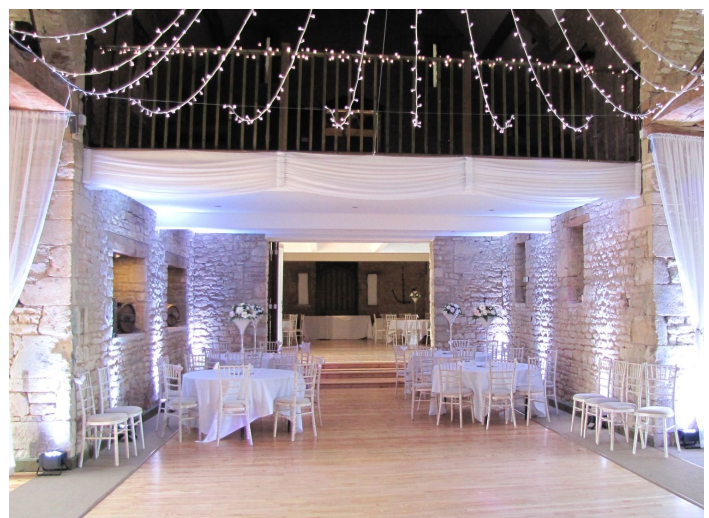

One of the most quickest cost-effective and successful ways to completely personalise a venue to compliment your event or colour scheme.

Our lights are all wireless, so there are no unsightly wires or power cables, and therefore can be placed pretty much anywhere inside the venue.

Many colours can be achieved to match your vision of how you would like the venue to be lit up.

All our lights are LED, so do not get hot and therefore are a much safer alternative to other traditional venue lighting.

The lights can be hired for the whole day or just the evening.

Please don't hesitate to contact us should you require any further information.
